

FIReVision:

A Photorealistic Thermal IR Simulator for Wildfire Robotics

Presented By: Kayla McFarlane

AIR LAB

THE ROBOTICS INSTITUTE

Carnegie Mellon University

Wildfires Are A Growing Challenge

Wildfires are becoming more frequent and complex.

Drones offer advanced monitoring capabilities, enhancing firefighter safety and effectiveness

FIReVision: a photorealistic thermal infrared simulator.

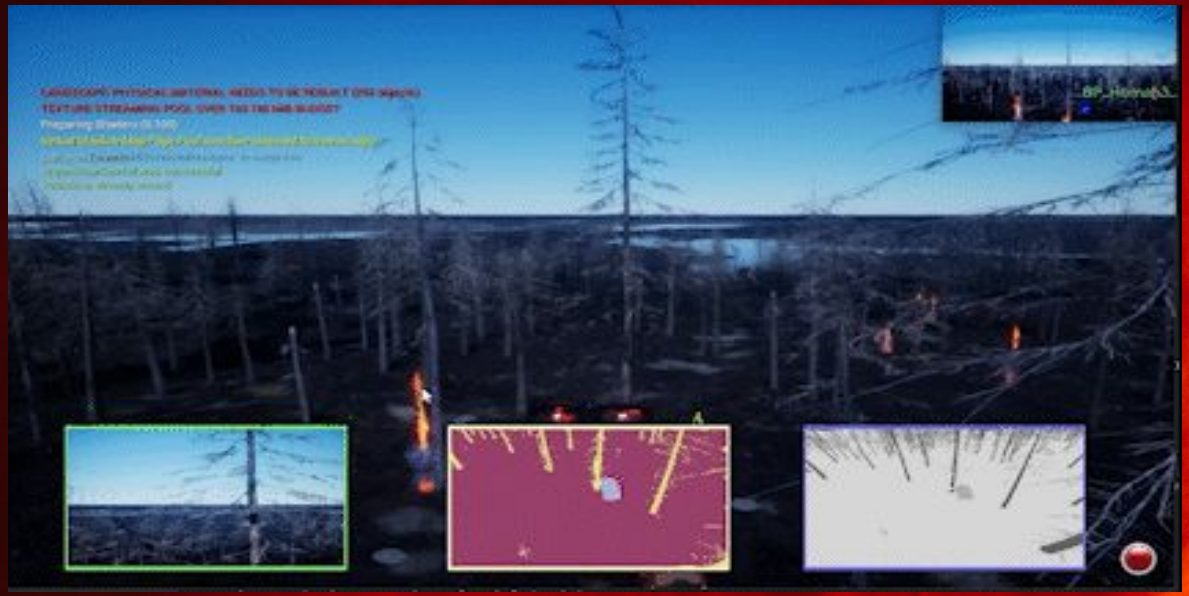

Features:

- Realistic thermal and RGB vision
- Dynamic smoke
- Built using Airsim & Unreal Engine 5

Personal Contributions to FIReVision

Developed Python Scripts for:

- Drone Navigation
- Real-time Object Detection
- Data Collection

Thank You For Listening!
